The subject matters of claims 1-31 appear to involve an inventive step in view of documents 1-3 respectively cited in the ISR and documents 4-5 respectively found later.

Documents 1-5 do not describe a transformant of an organism capable of producing a secondary metabolite having a benzene ring structure not substituted by a functional group containing a nitrogen atom at the para-position, which has been transformed to produce a secondary metabolite having a benzene ring structure substituted by a functional group containing a nitrogen atom at the para-position, by introducing the genes participating in the biosynthetic pathway from chorismic acid to p-aminophenylpyruvic acid, consisting of the gene encoding 4-amino-4-deoxychorismic acid synthesizing enzyme, the gene encoding 4-amino-4-deoxychorismic acid mutase and the gene encoding 4-amino-4-deoxyphenic acid dehydrogenase. Furthermore, a person skilled in the art could not have easily conceived of this matter from documents 1-5 either.
